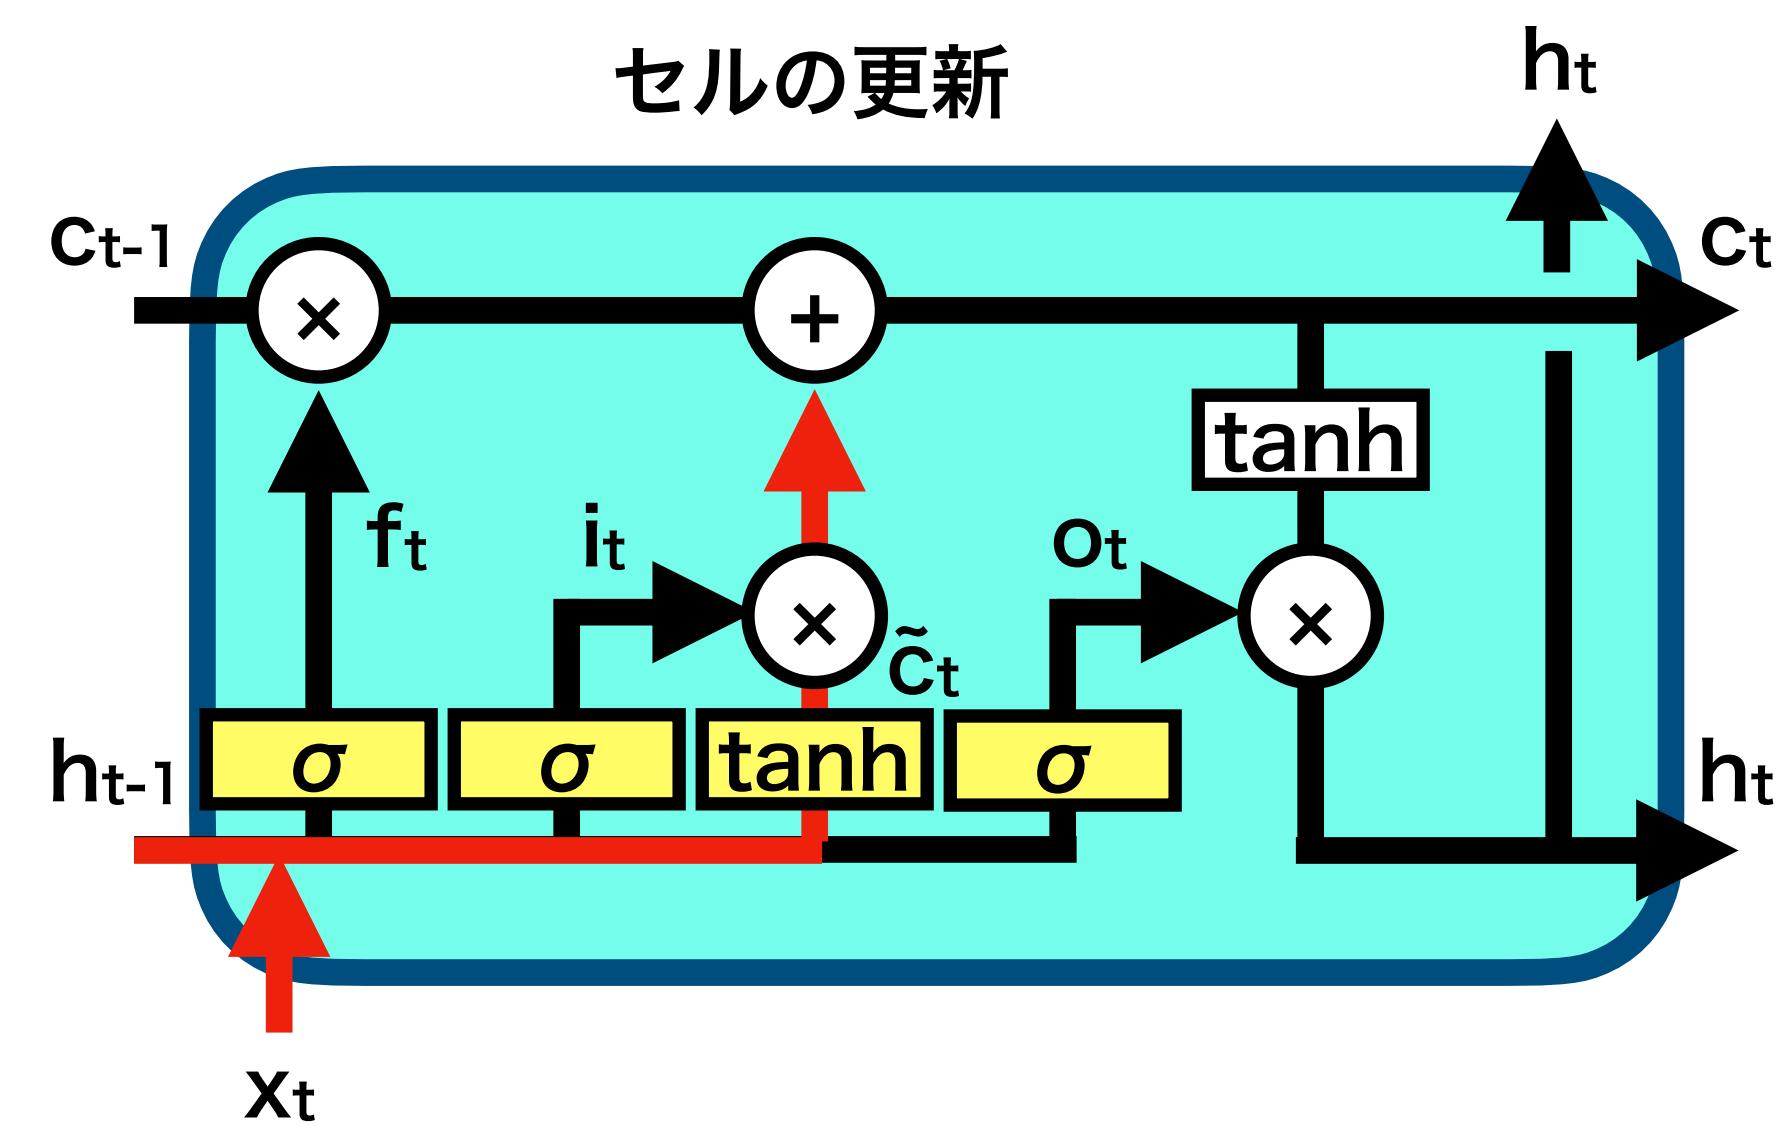

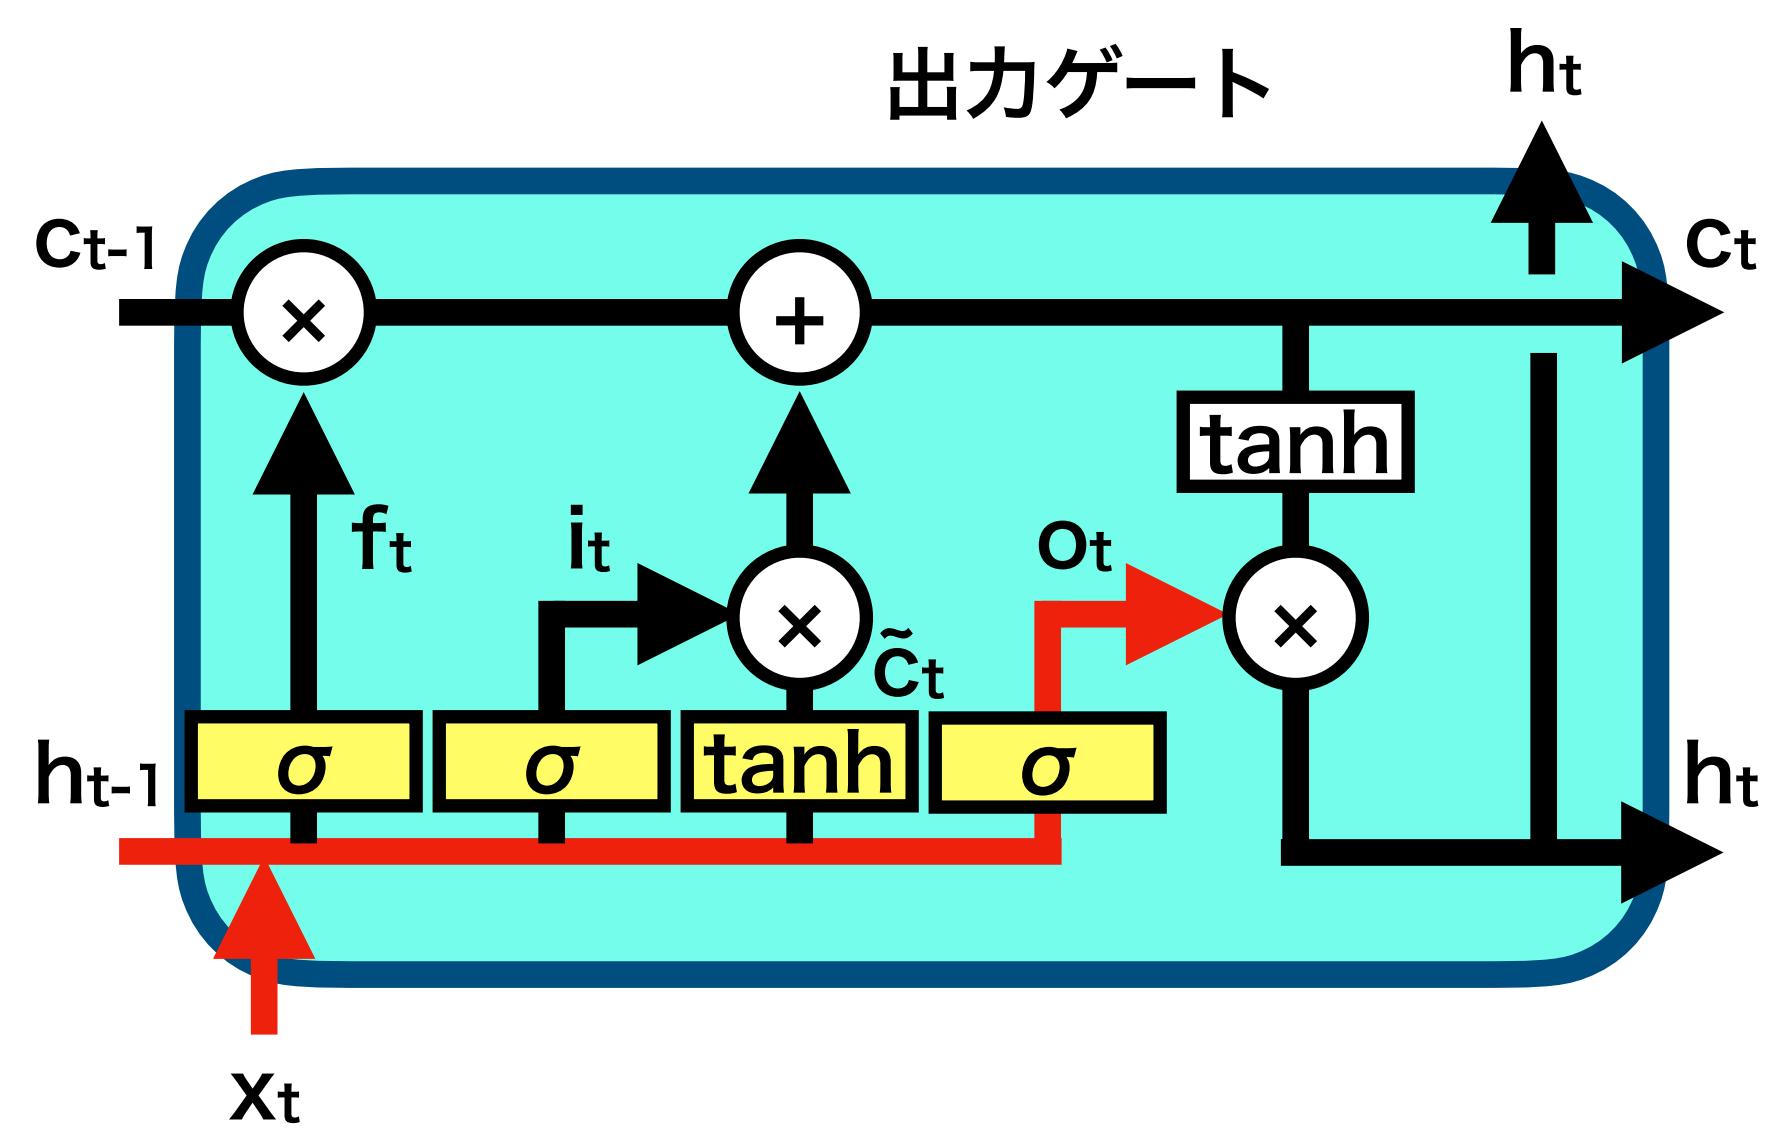

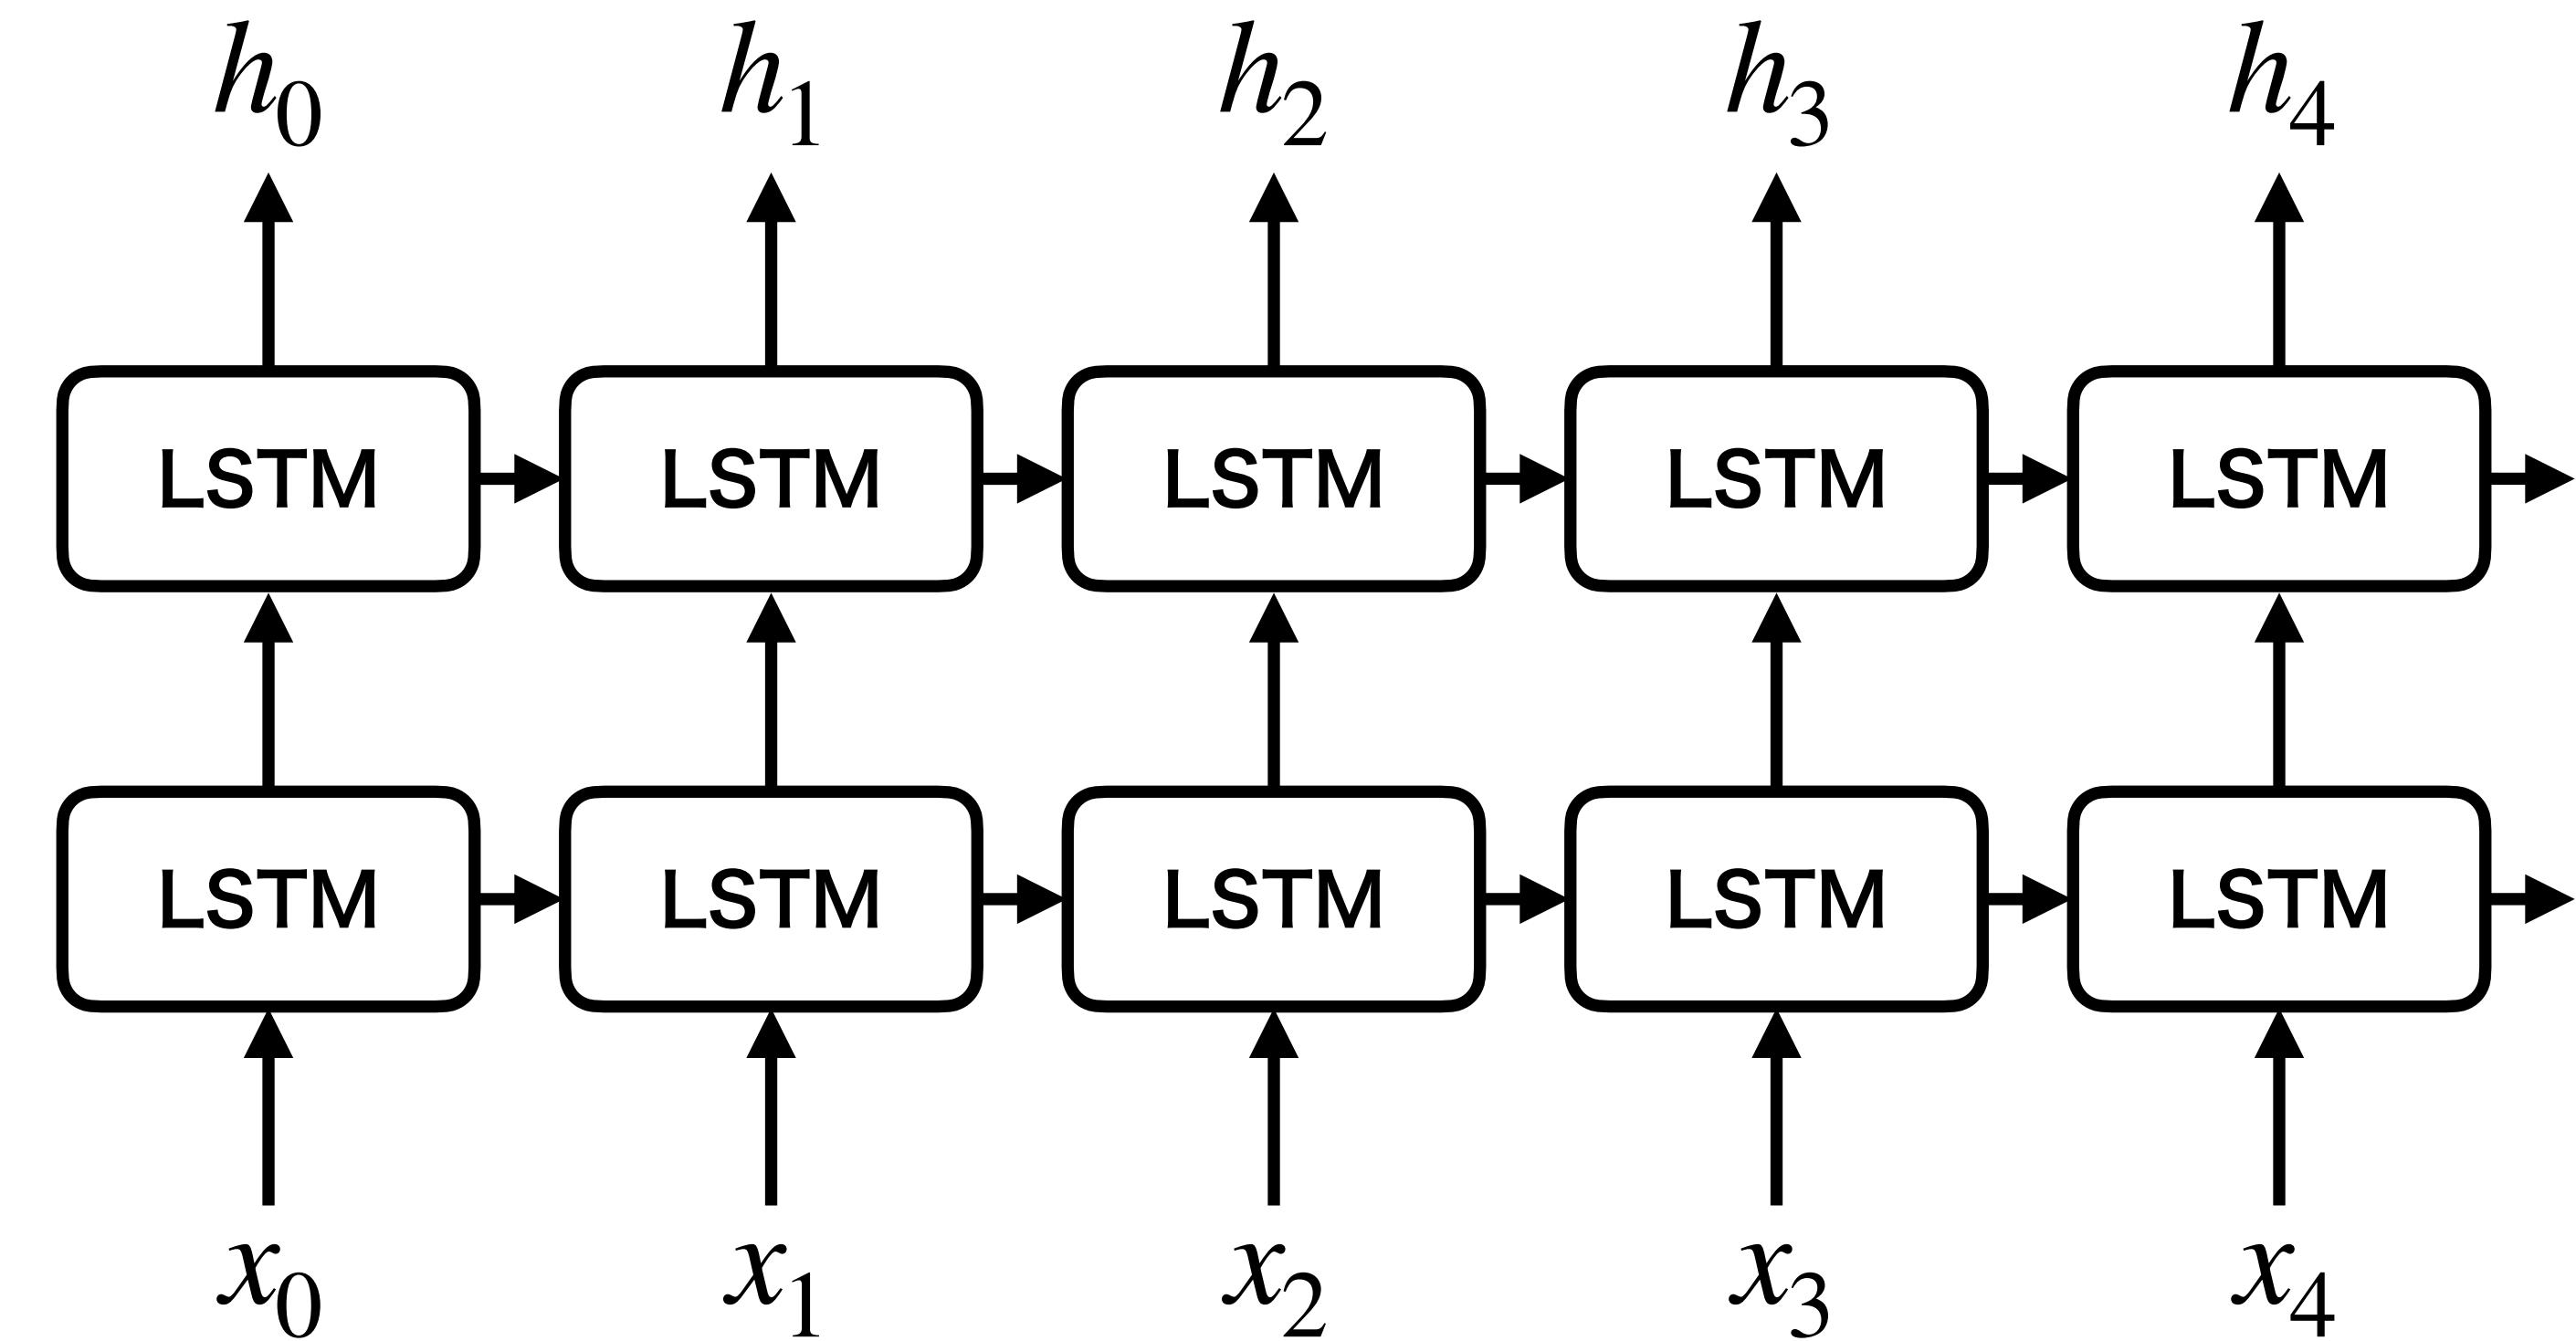

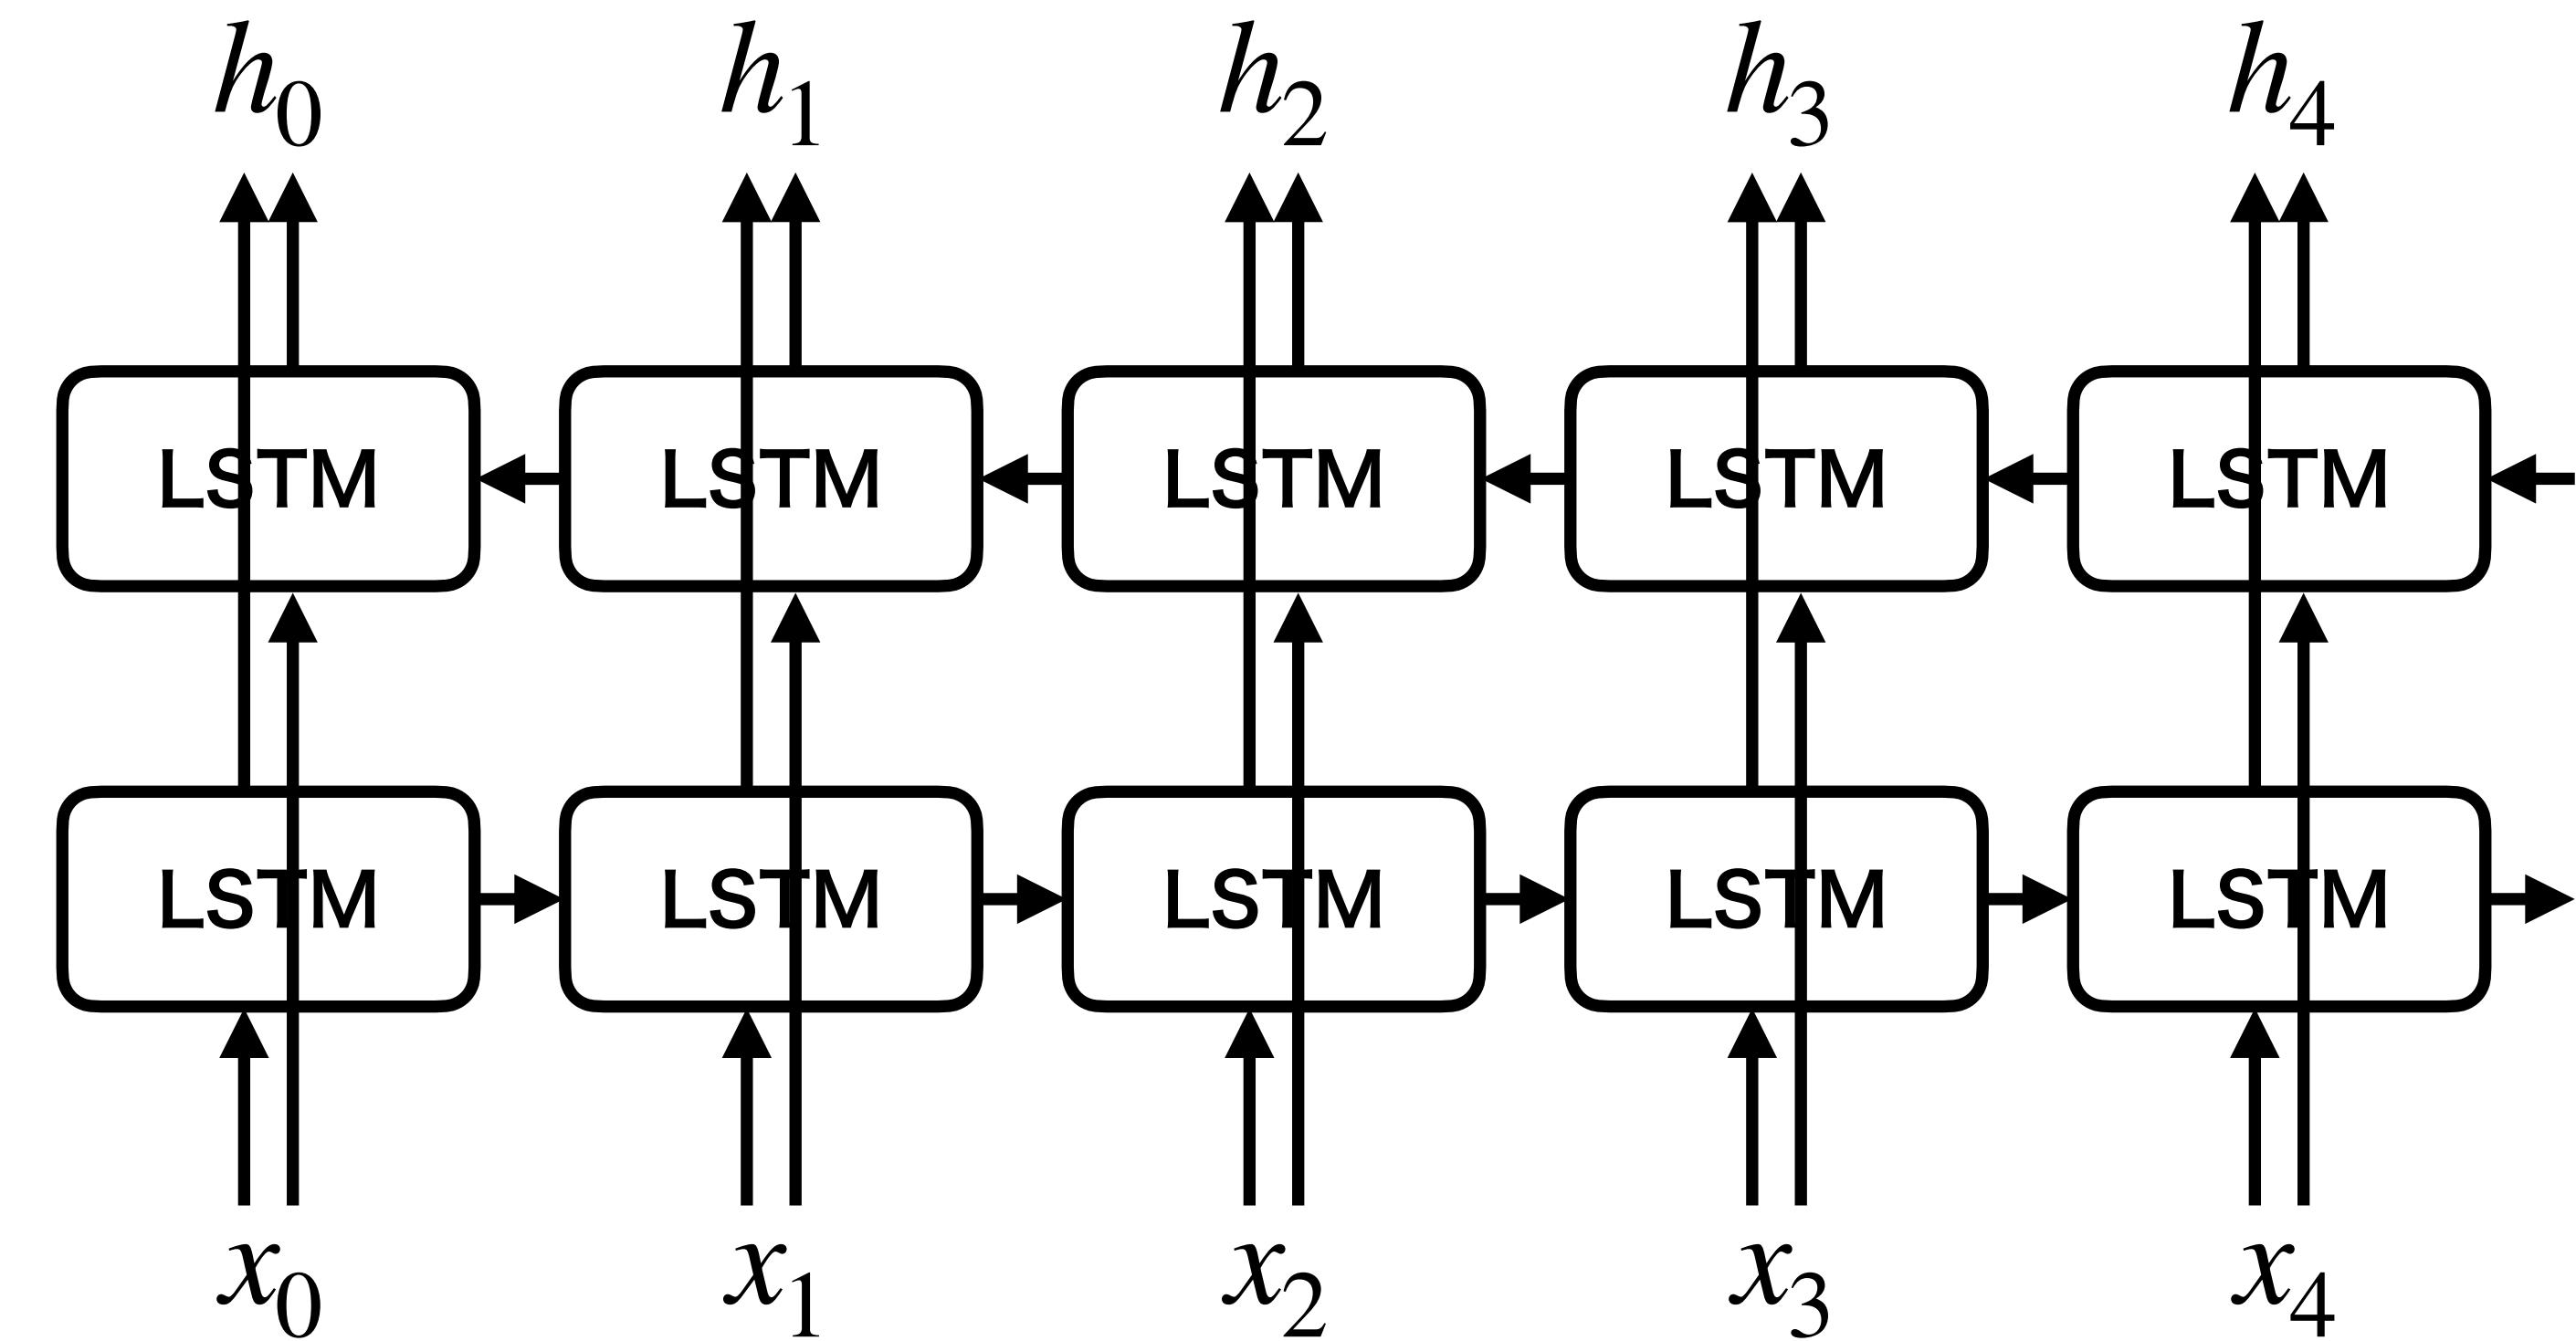

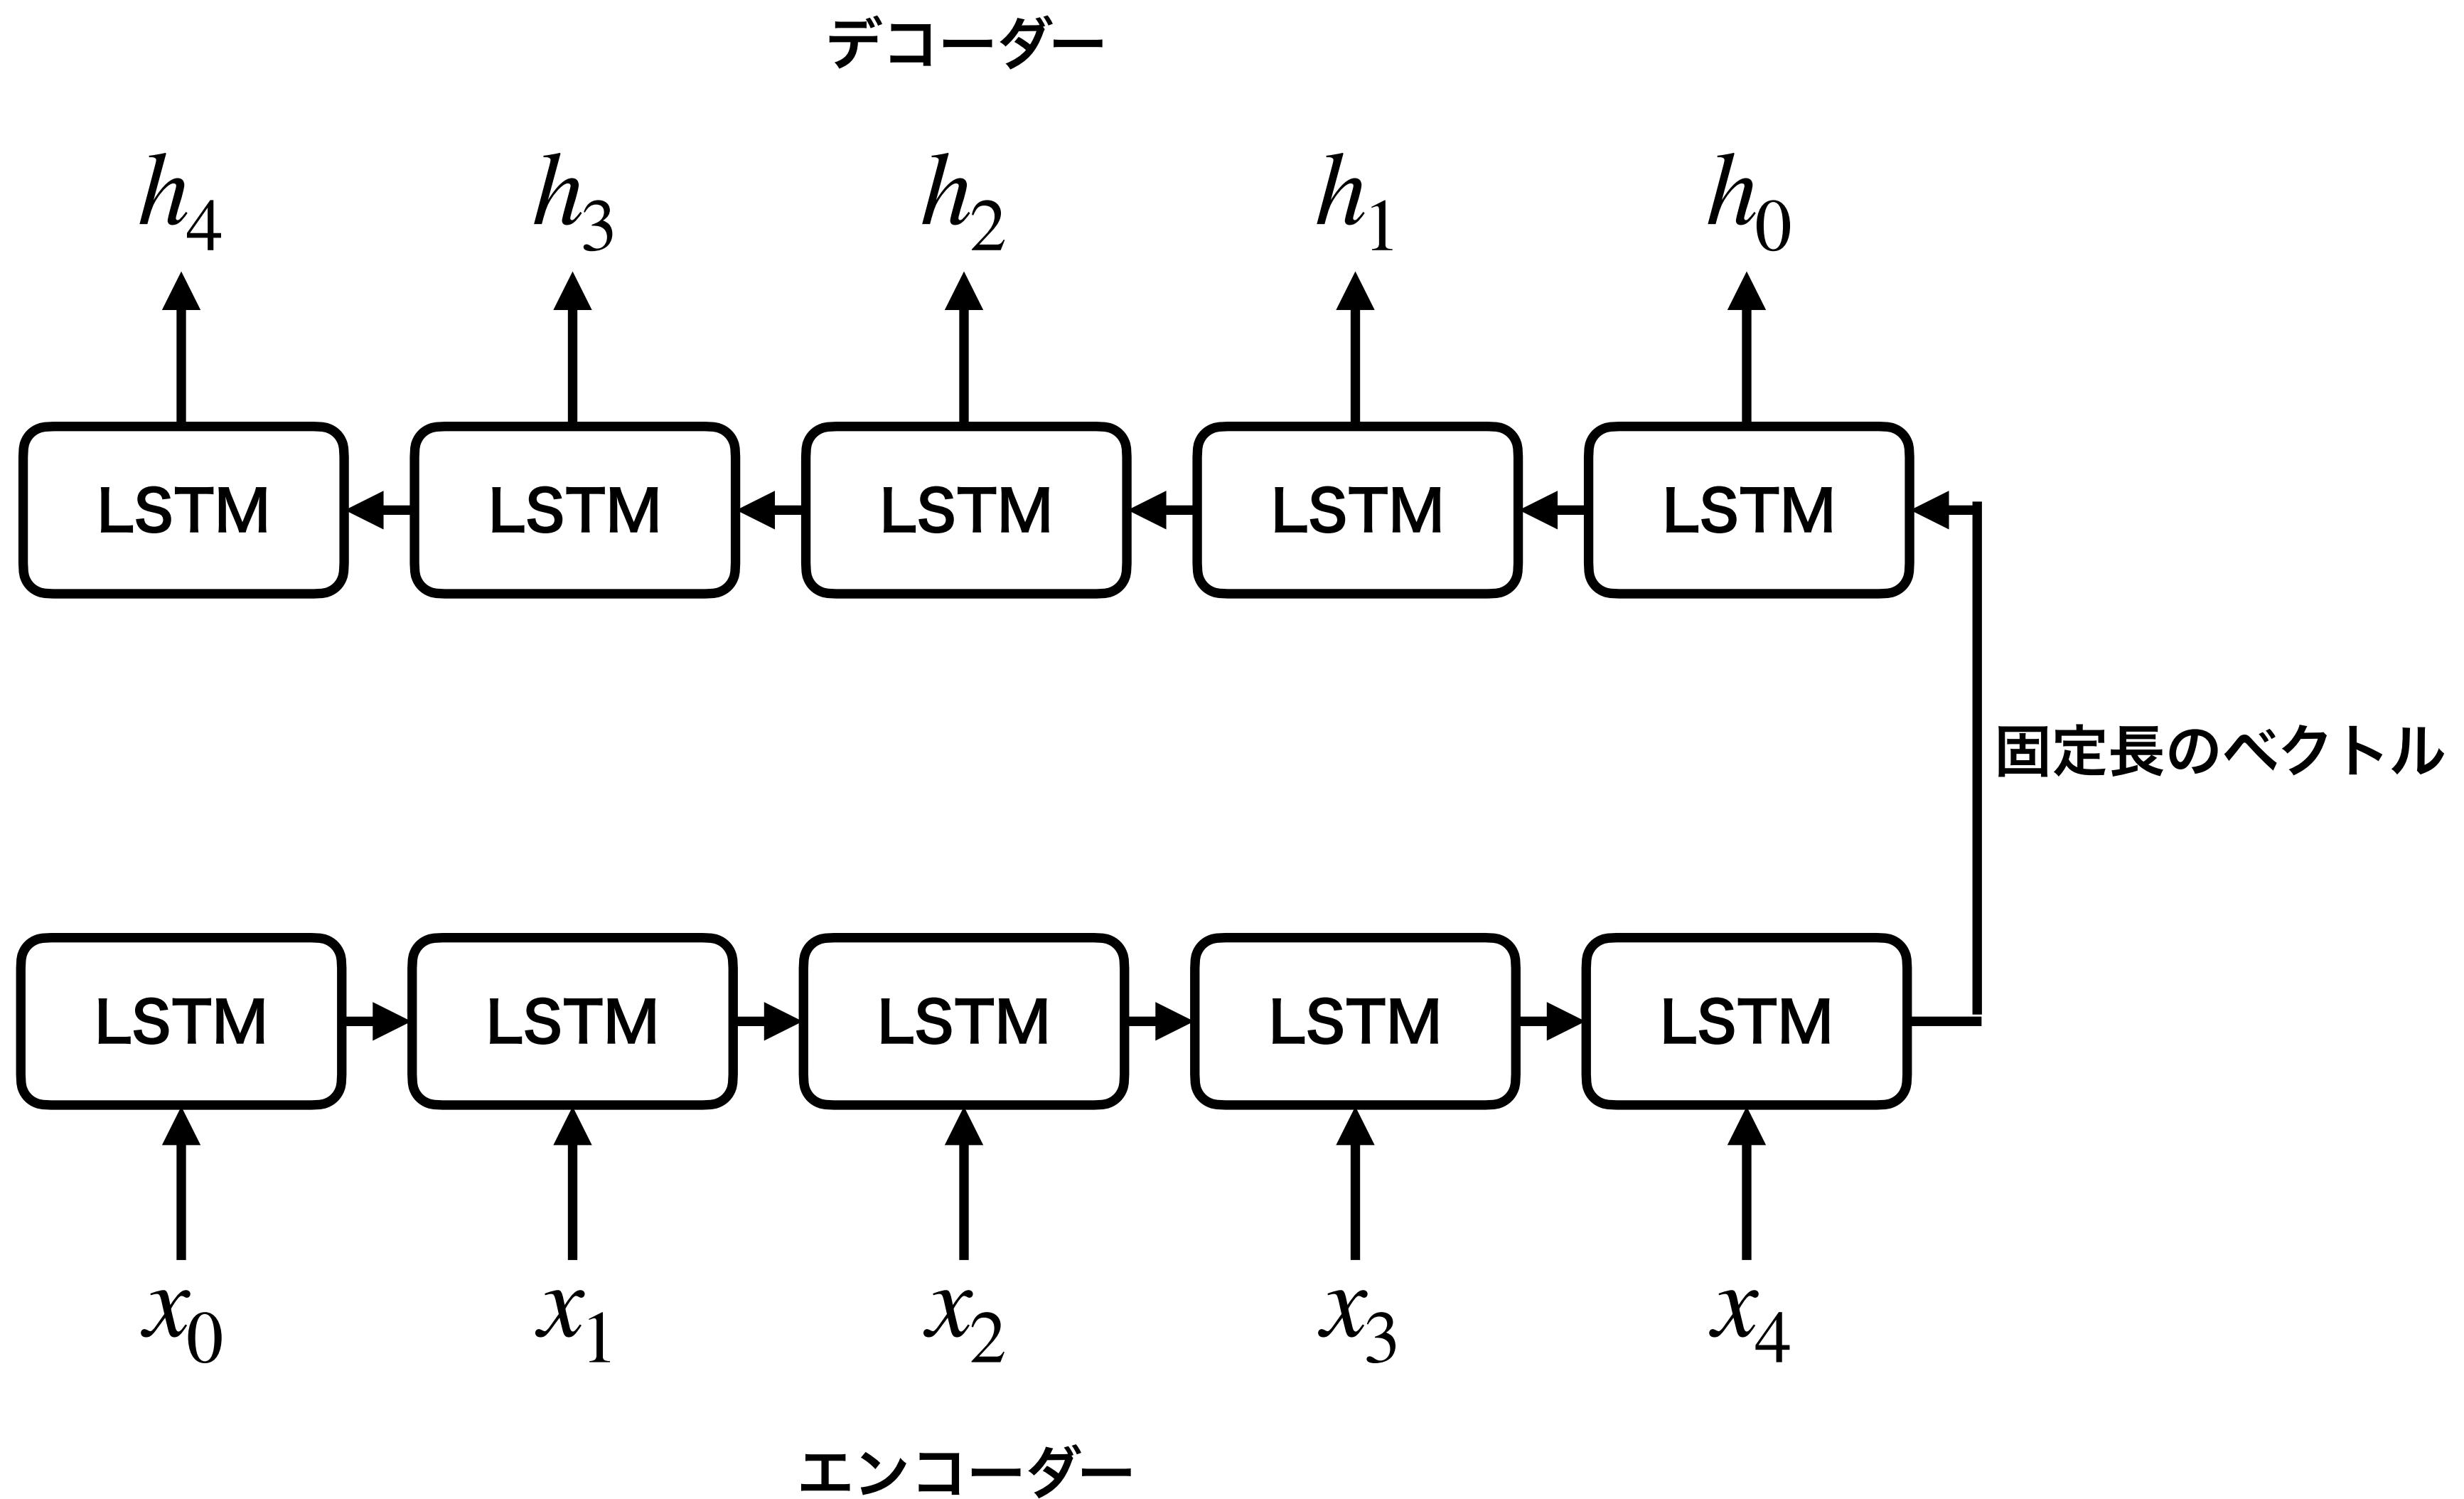

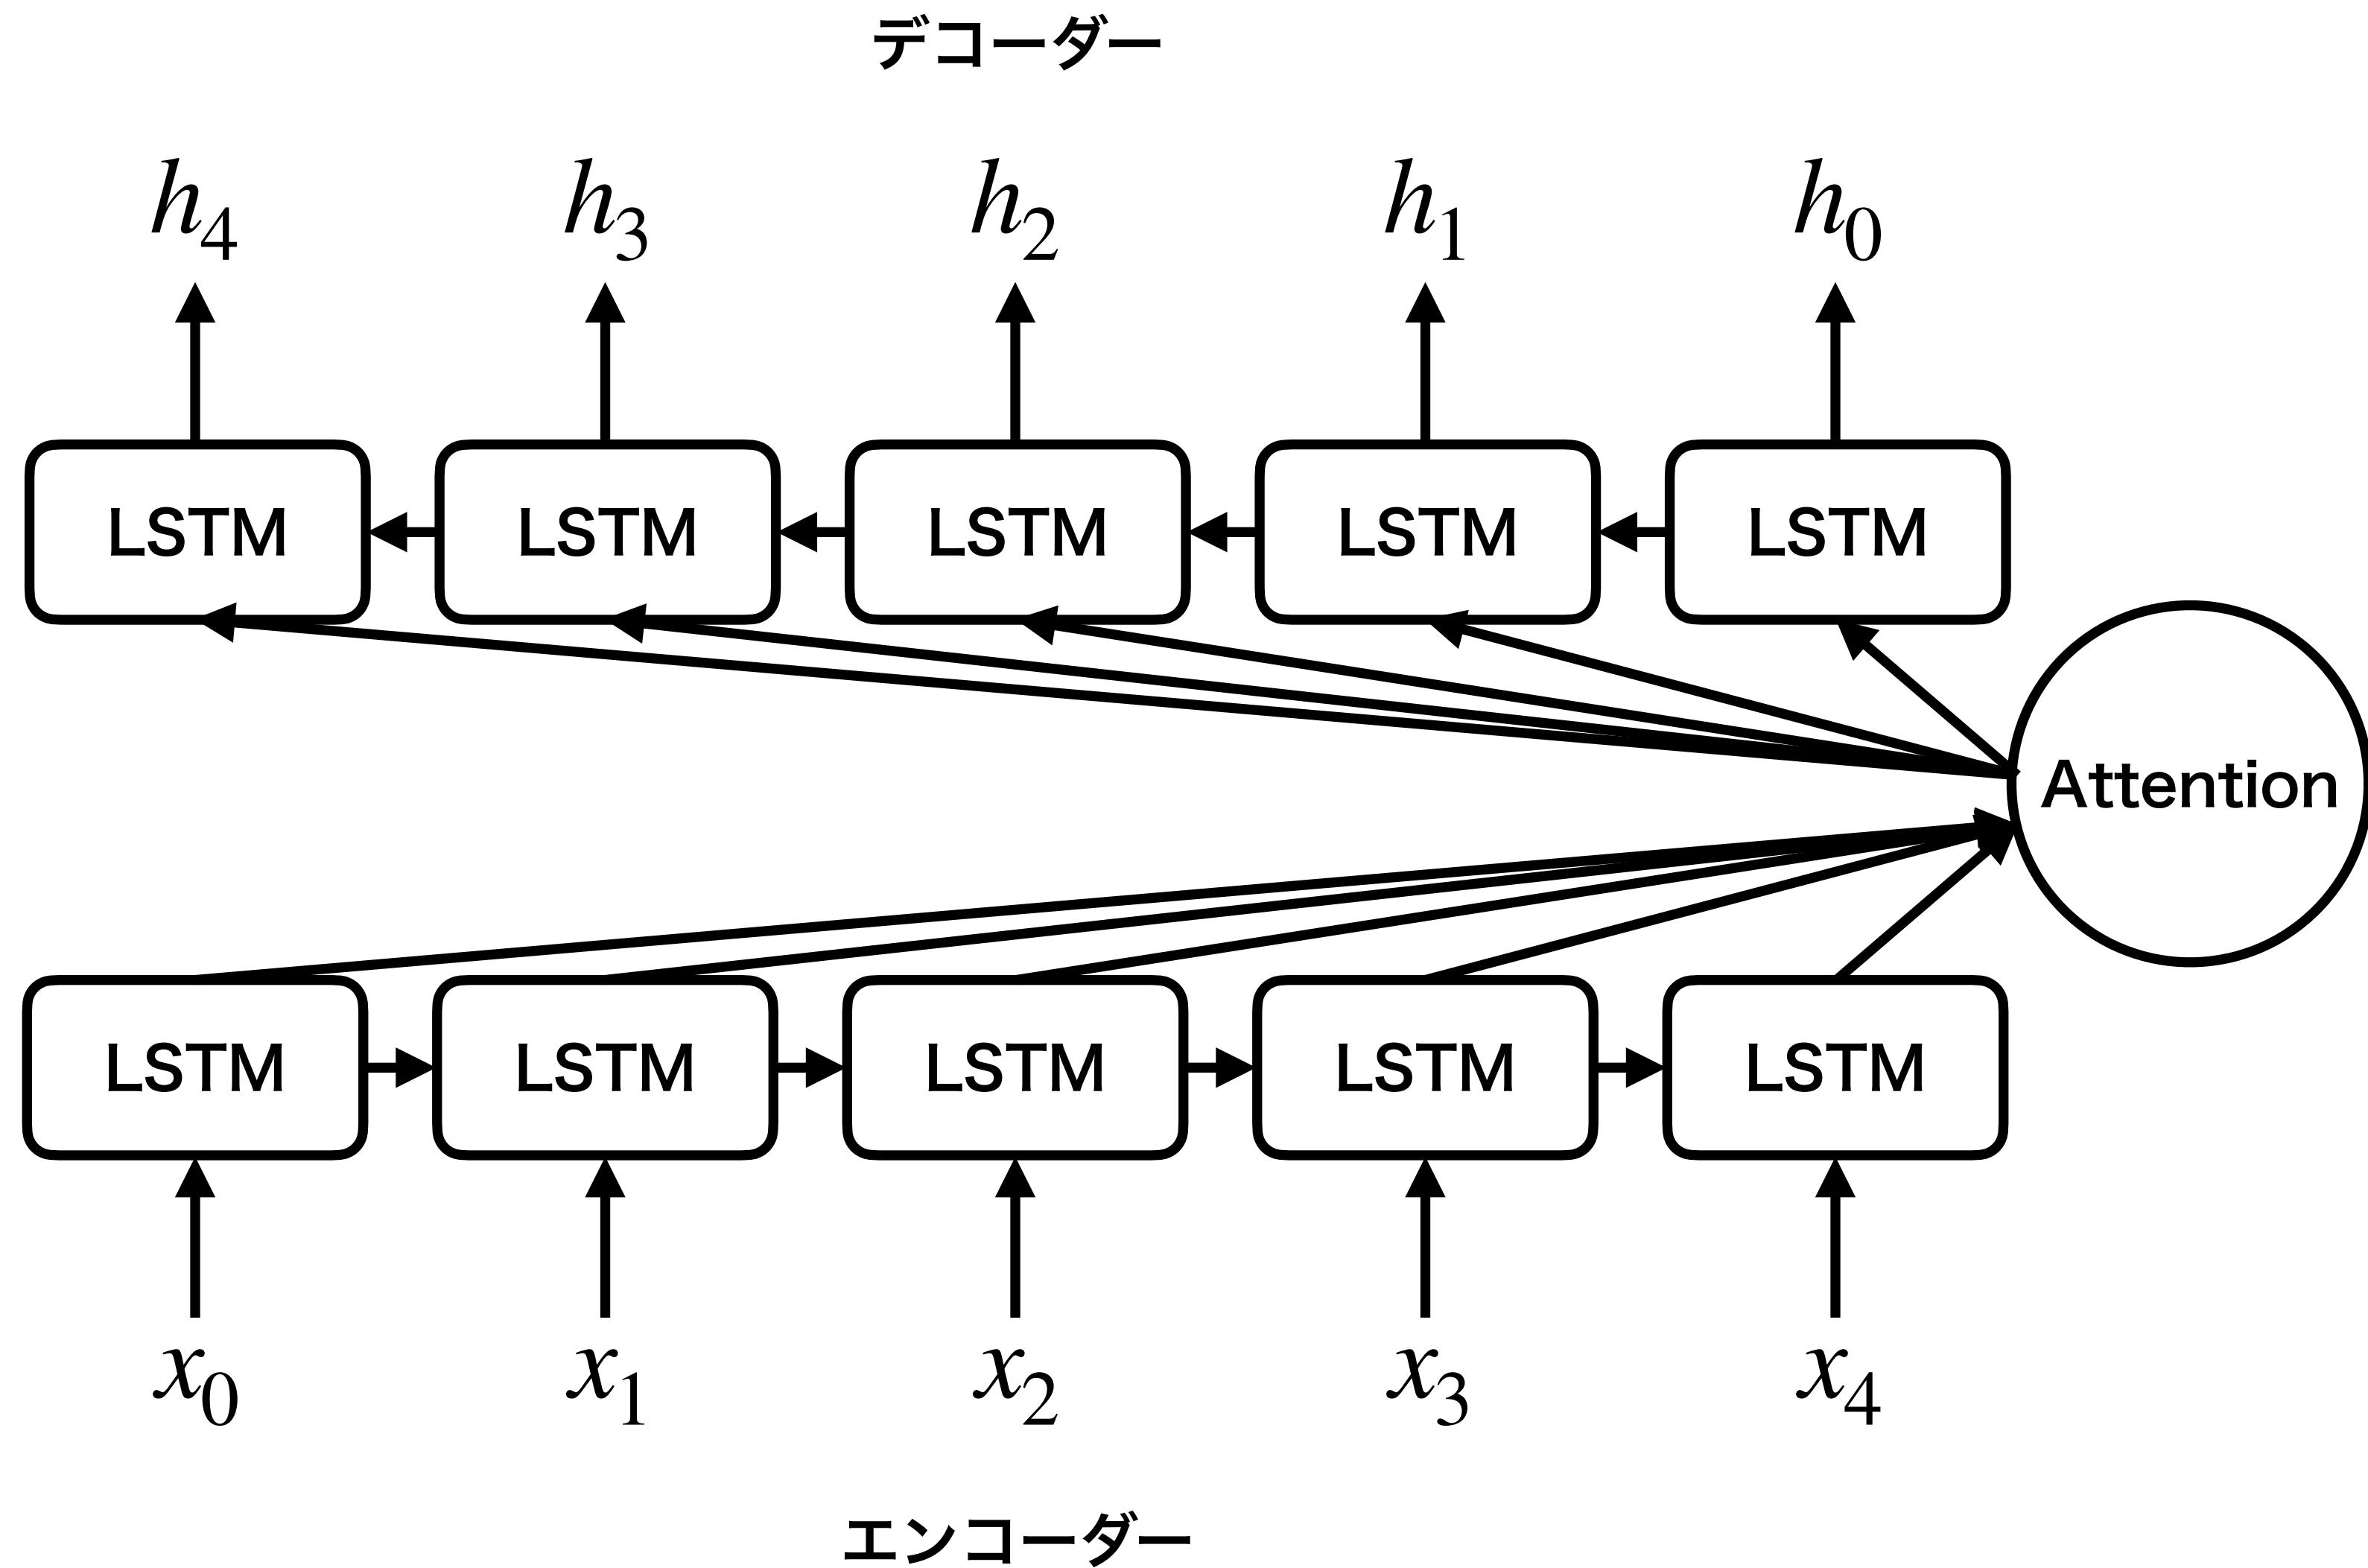

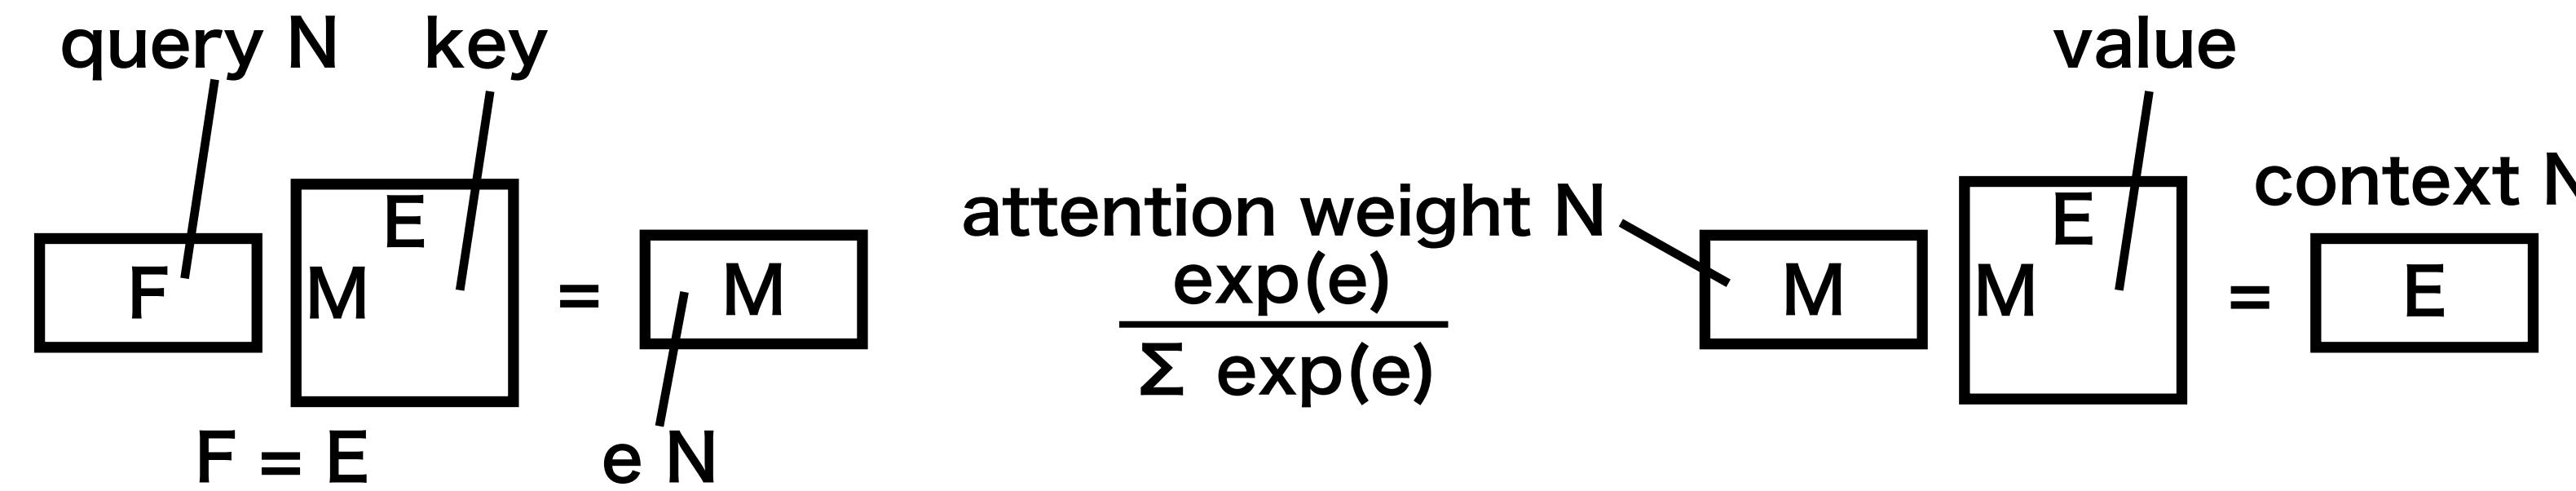

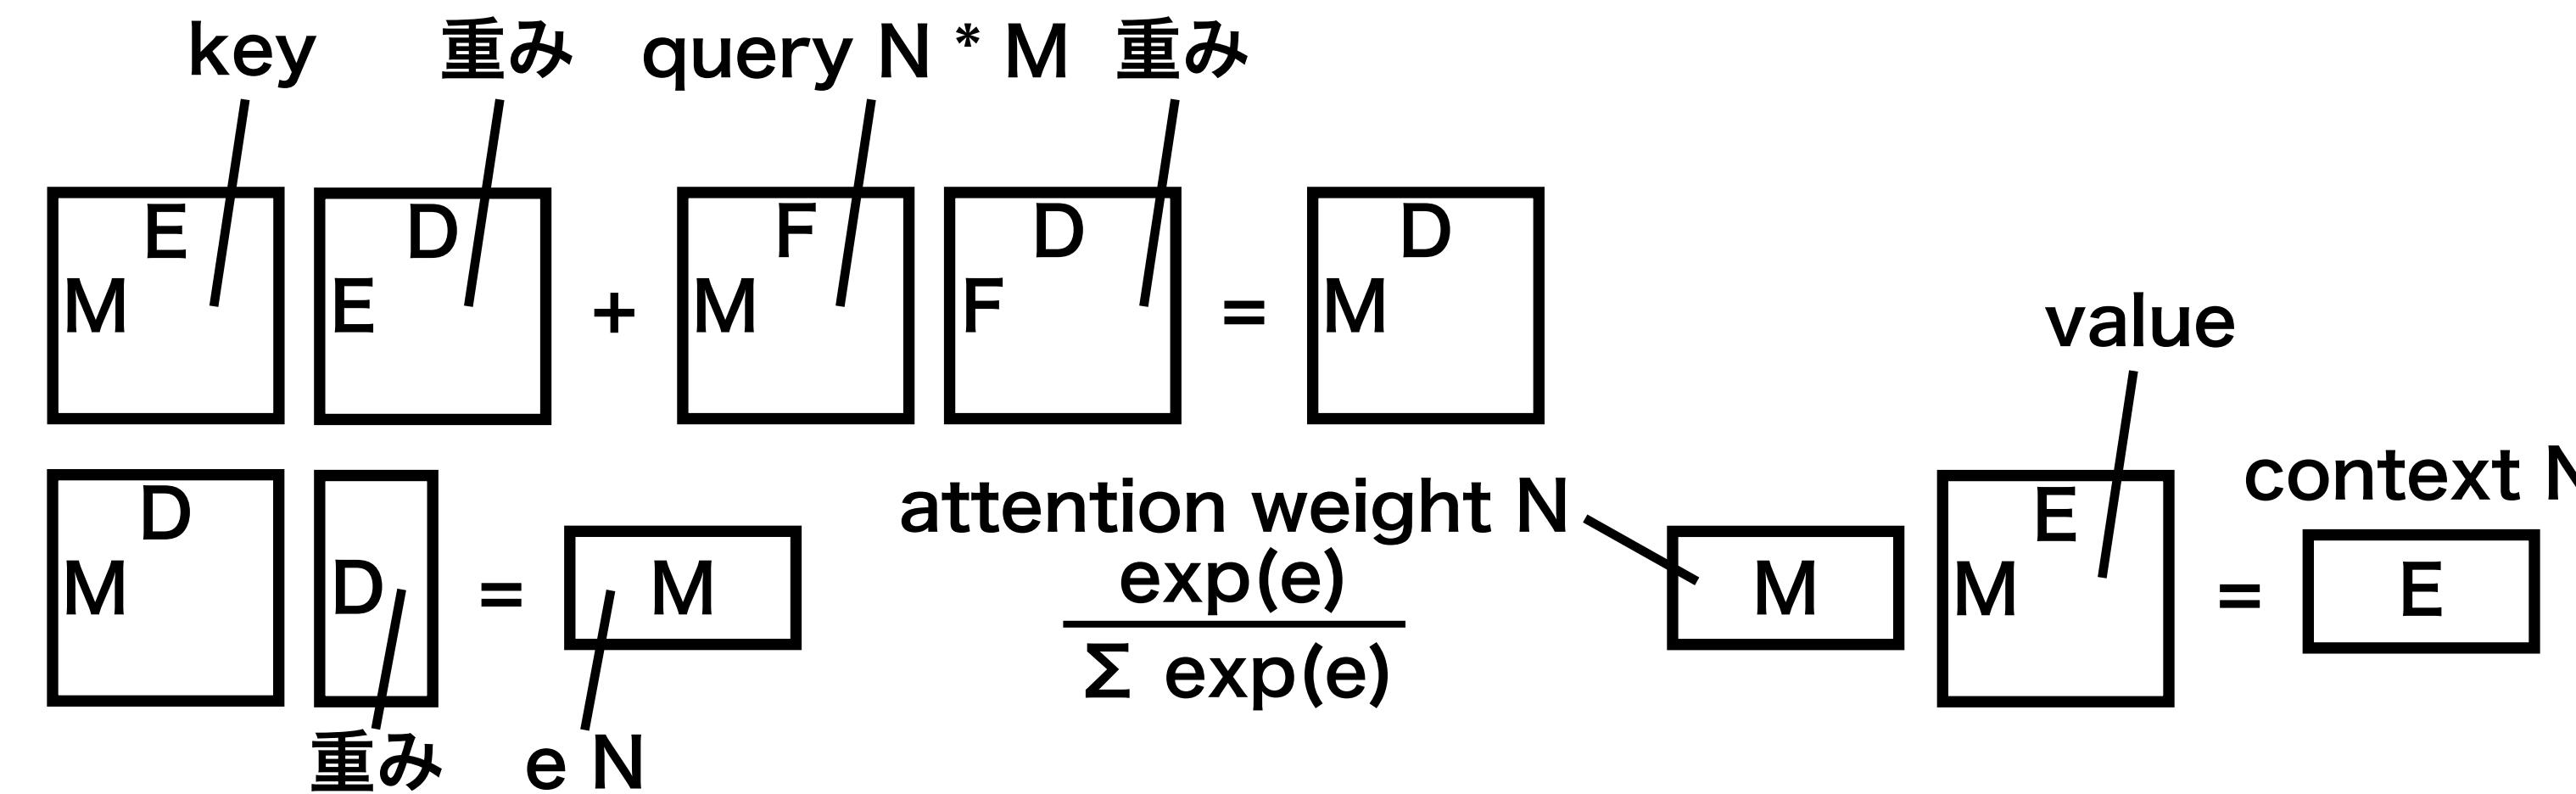

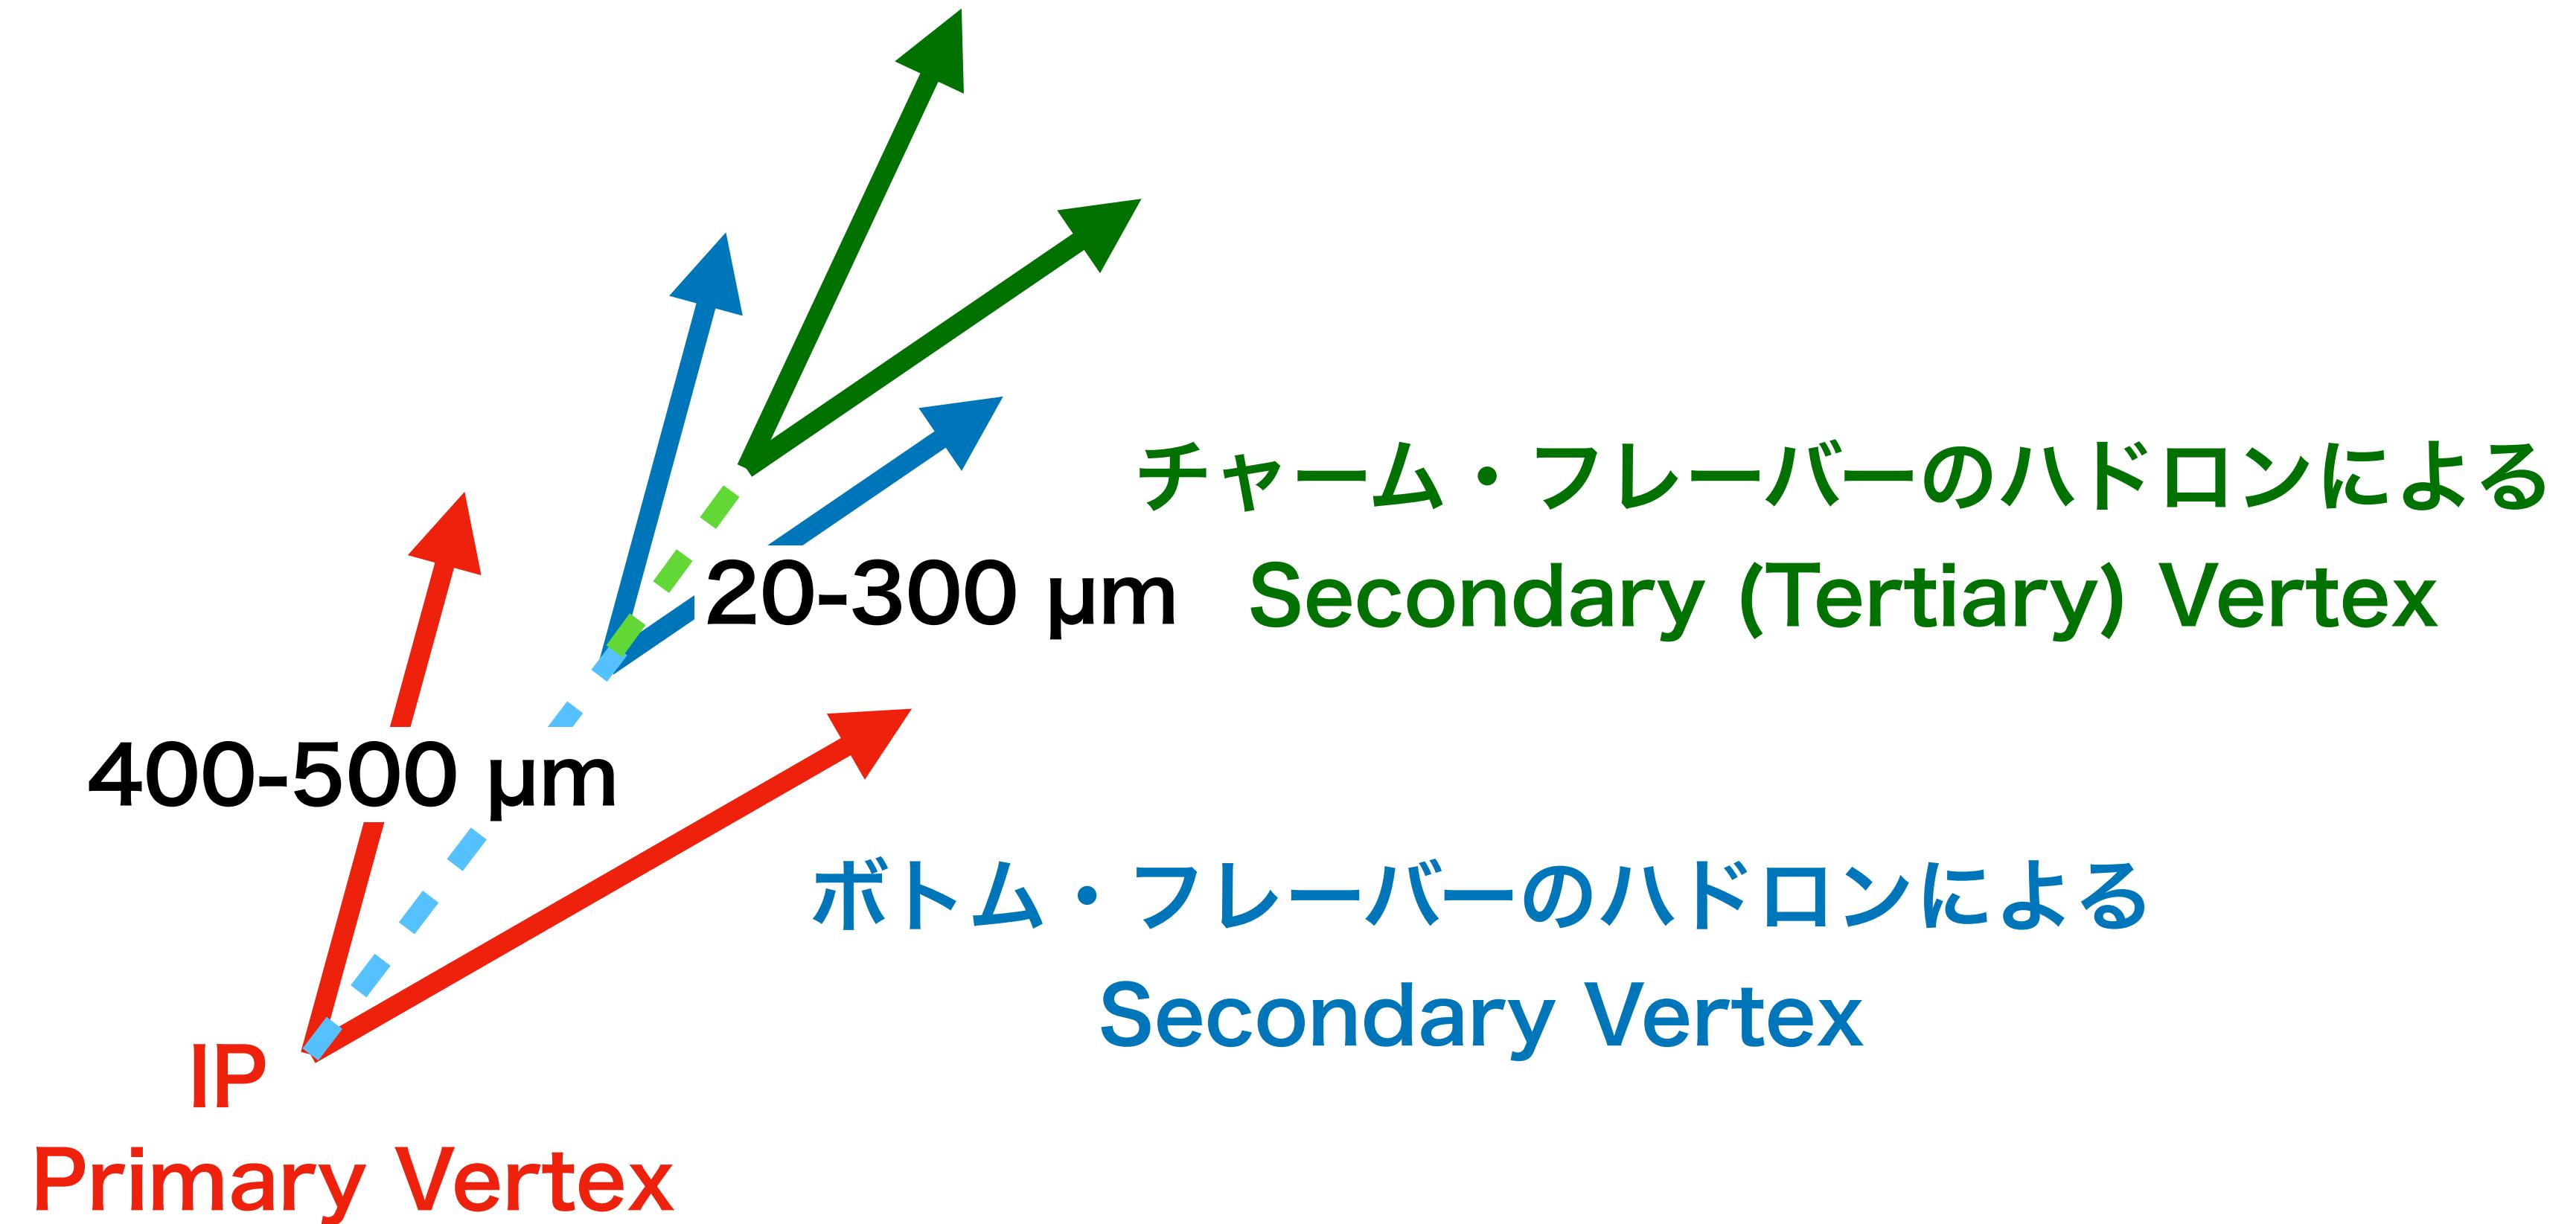

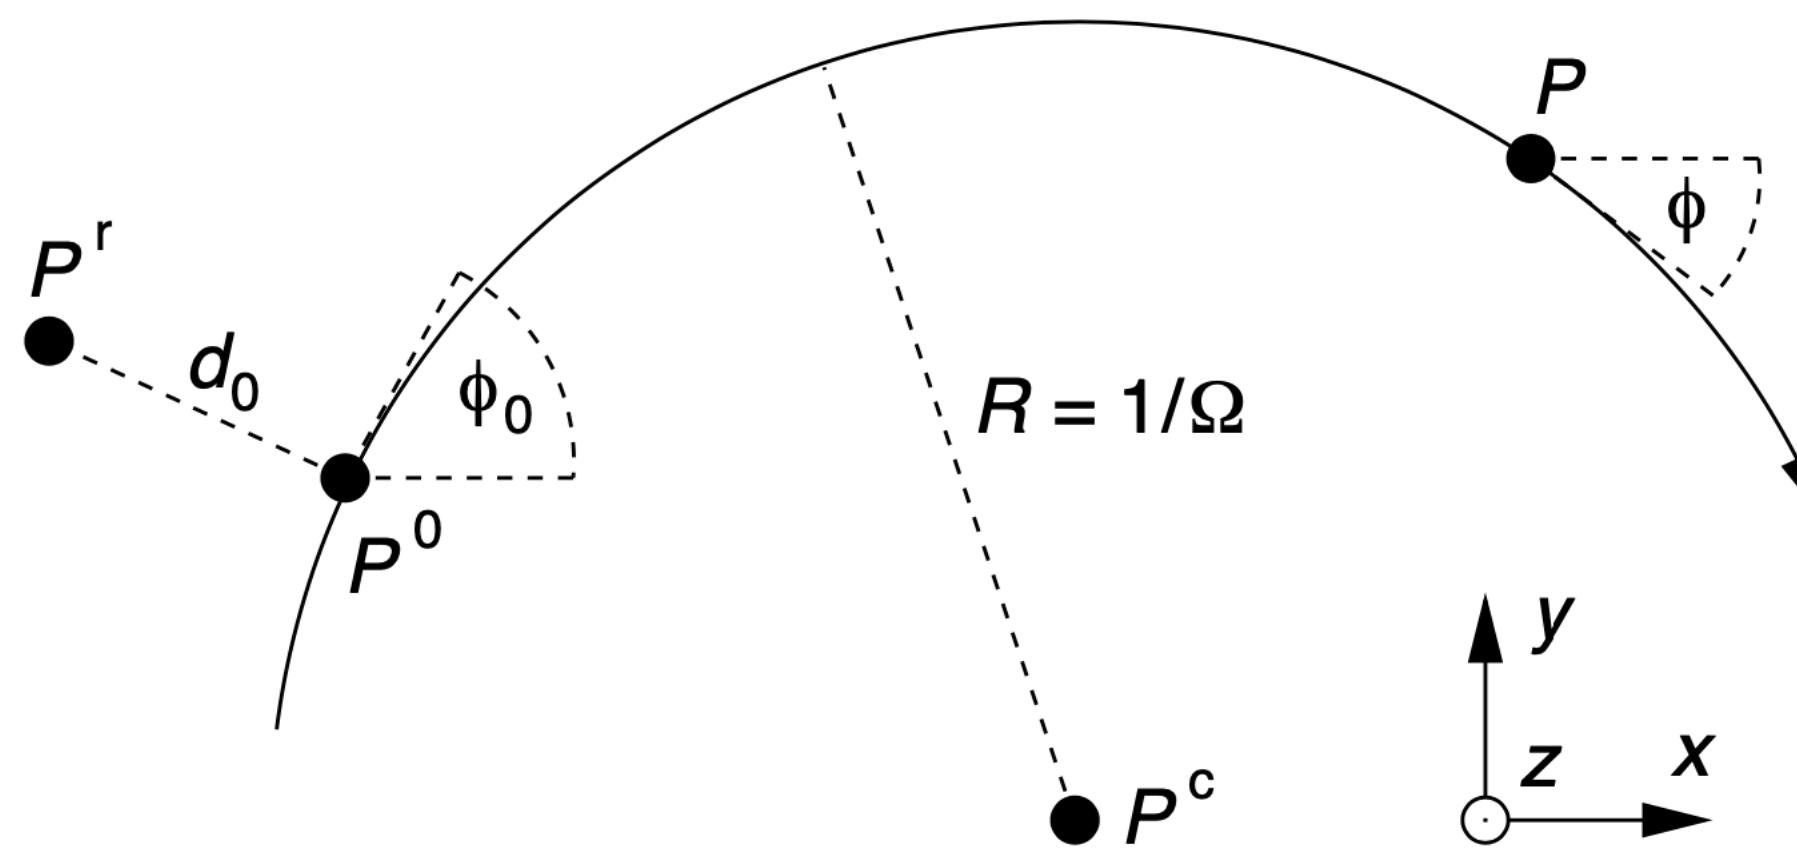

Figure 1: The projection of a helix segment in the xy plane is a part of an arc with centre \mathbf{P}^c and radius R . The direction of the particle is shown with the arrow at the arc. All track parameters are given relative to the reference point \mathbf{P}^r .

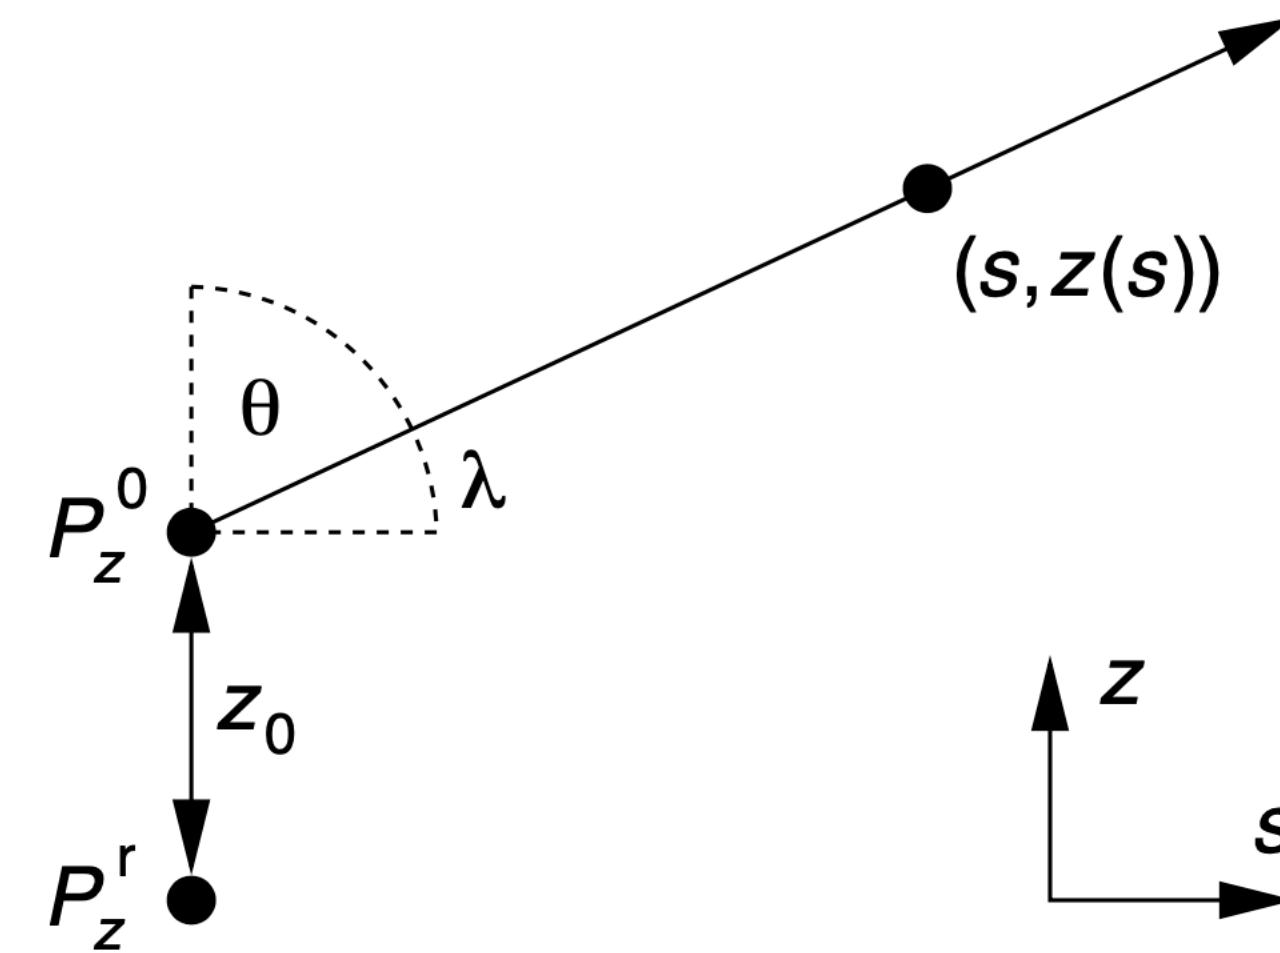

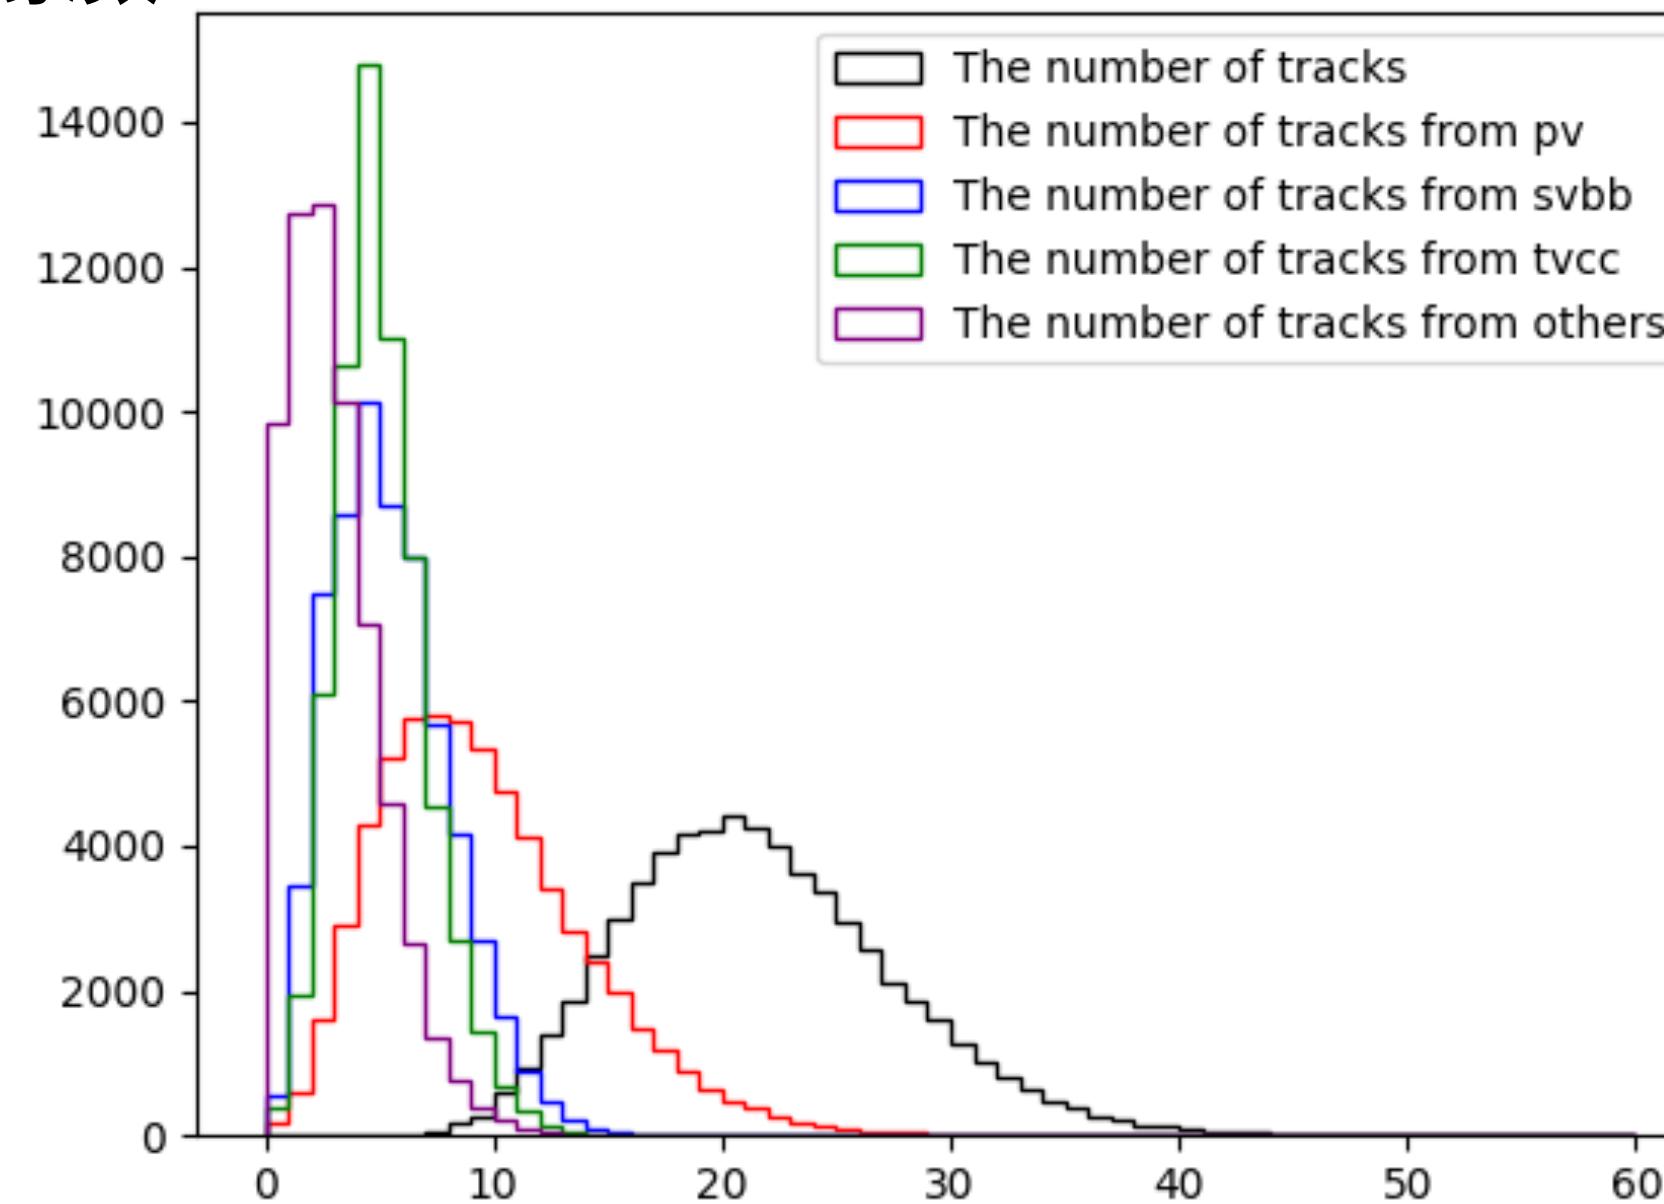

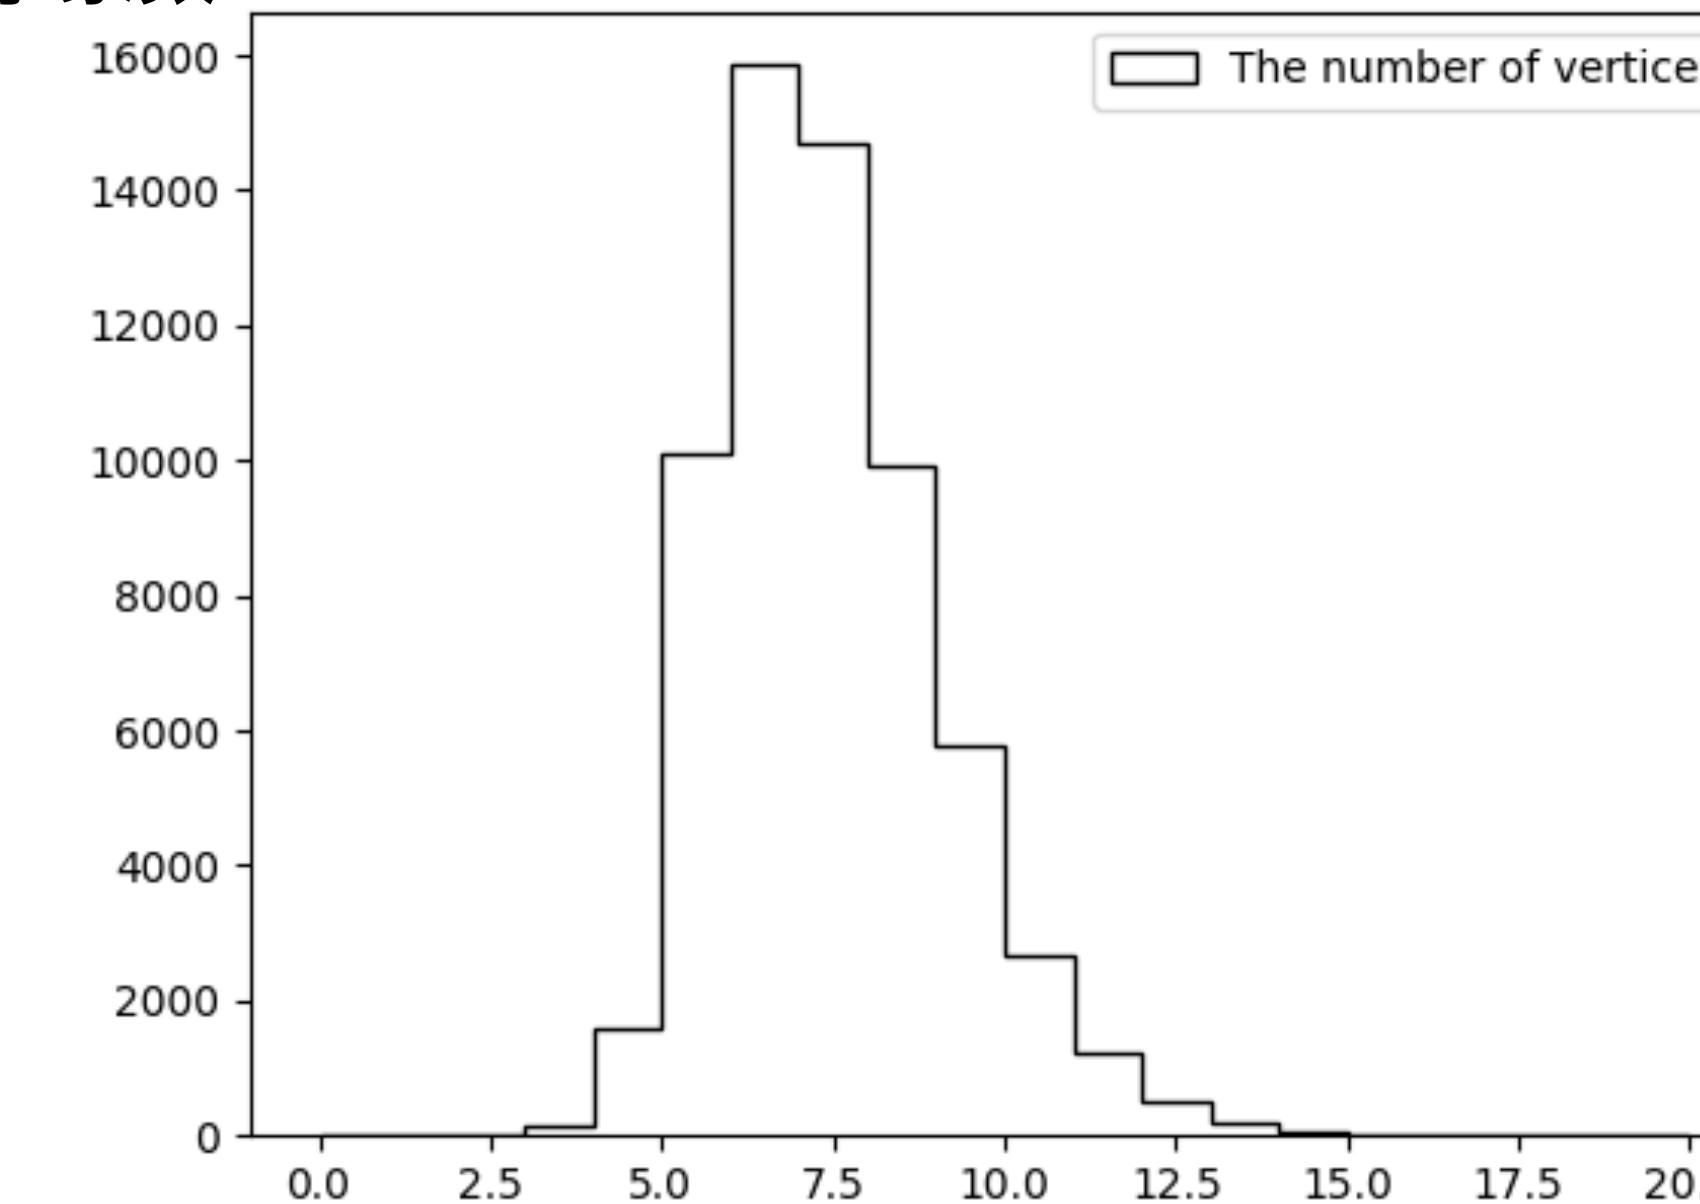

Figure 2: The projection of a helix in the sz plane is a straight line (see Eq. 10). The variable s at a point \mathbf{P} is the arc length in the xy plane from \mathbf{P}^0 to \mathbf{P} . This also implies that $s = 0$, if $z = z_0$.
